WIN A **FREE AIR POLISH** AT PFD IN PORTSTEWART

Air polishing is the most effective in-surgery cleaning procedure, it is a drill-less method which can be used to remove stains from the surface of the tooth. The treatment consists of pressurised non-toxic aluminium oxide powder which rapidly removes surface discolouration whilst conserving healthy tooth structure.

Air polishing has proven results to remove the toughest stains caused by day to day drinking, eating and smoking. It is also an ideal treatment for those who experience dental anxiety; it is a gentle procedure as it doesn't generate sound, heat, pressure or vibration therefore minimising the need for anaesthetic.

“Reading all the information about the benefits of air polishing, I had no reason why I shouldn't give it a try.” said Lauren. **“Here are my before and after photographs:**
