

Do you want straight teeth?

GET STRAIGHT TEETH AND THE BEAUTIFUL SMILE YOU HAVE ALWAYS WANTED AT PORTSTEWART FAMILY DENTAL.

Why six months and not two years?

Cosmetic braces utilise the latest technology and techniques in orthodontic dentistry to move your teeth in a manner that is both quick and safe. The treatment focuses on moving the teeth that show when you smile rather than all of your teeth, and it uses special nickel titanium wires to achieve this.

Will people see my braces?

The Cosmetic braces' system uses tooth-coloured braces and wires that are only visible when close-up. They are not like train-track braces; however, they are more visible than clear braces like the Invisalign system, but the benefits of completing treatment in a fraction of the time outweigh this.

A recent Patient Testimonial:

So why not give us a call and book for a consultation? At Portstewart Family Dental we can take a 3D digital scan so you can see the possible results before you commit to treatment.

Are you amongst many adults who are unhappy, self-conscious or even embarrassed about your smile?

Have you considered orthodontic or teeth straightening treatment but been put off by the prospect of wearing braces or aligners every day for up to three years?

Now there is an answer for those wanting a quick fix for their crooked smile – the cosmetic braces treatment. This is an orthodontic system that makes 'straight teeth' accessible for adults.

At Portstewart Family Dental, we believe that EVERYONE should smile with confidence. Clear braces and short treatment times make that possible as adults now have a realistic option.

COSMETIC BRACES

A revolutionary combination of proven orthodontic techniques, modern materials, and innovative thought – Cosmetic braces utilise specialised clear braces to gently straighten

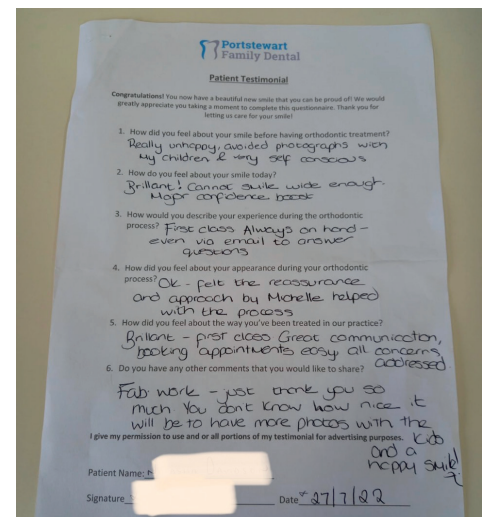

and align teeth in an average time of just six months.

Cosmetic braces can be used to treat a wide variety of orthodontic complaints, including:

- **Crowding** – teeth are too close together
- **Spacing** – gaps between teeth
- **Overbite** – teeth overlap too much
- **Overjet** – front teeth stick out
- **Underbite** – lower teeth stick out
- **Crossbite** – teeth bite on the wrong side of each other
- **Openbite** – your teeth do not meet when you bite
- **Misplaced midline** – centre lines of upper and lower teeth don't align

The main benefits of the Cosmetic braces are:

- What does the treatment involve? The wires are discreet, being small and tooth-coloured, the brackets are colourless.
- Treatment time is reduced by up to 75%.
- Discomfort is kept to a minimum, as the teeth are gently repositioned.

Hope to see you soon,

Until the next time,

Michele x
